HELLO PARTNERS

CLIMATE WEBINAR
MAY 14TH, 2024

JUMBO

AGENDA

- Jumbo's Climate Ambitions
  Lieke Kersten – Sustainability Advisor
- Plan and status
  Julian Markus – Sustainability Advisor
- What do we ask of our partners?
  Wibo van Wijk – Head of Buying
- Inspiration from a partner
  Eveline Tegelaar – Monchy Food Group
- FAQ
  Julian & Lieke

SUSTAINABILITY AT THE HEART OF OUR STRATEGY

MAKING HEALTHY AND SUSTAINABLE SHOPPING FUN AND AFFORDABLE

LOCAL INVOLVEMENT

HEALTHY EATING

SUSTAINABLE VALUE CHAINS

WASTE REDUCTION

GOOD EMPLOYMENT PRACTICES

OUR GLOBAL FOOD SYSTEM HAS A HUGE IMPACT ON CLIMATE AND NATURE

1/3 of **greenhouse gas emissions** is coming from our food system

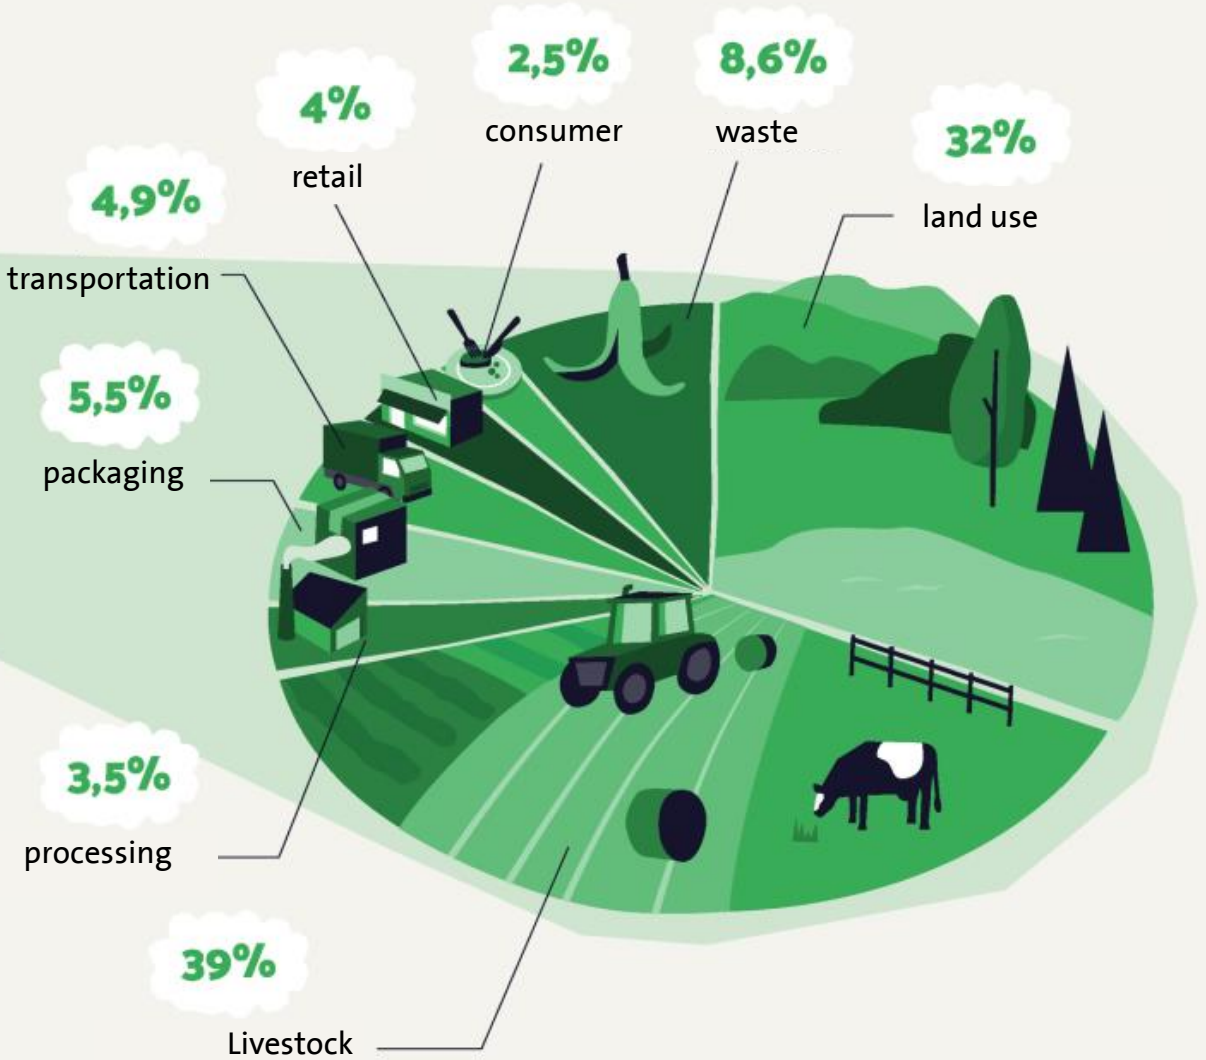

of the world's food **goes to waste**

SAMEN TEGEN VOEDSELVERSPILLING

*De belangrijkste zijn CO_2, methaan (CH_4) en lachgas N_2O.

Bronnen: Crippa et al. (2021), UNEP (2021) en WWF-UK (2021).

GOVERNMENTS AND COMPANIES HAVE COMMITTED TO TARGETS TO REDUCE EMISSIONS AND FIGHT GLOBAL WARMING

Paris Agreement 2015

Door NU.nl/ANP

12 dec 2015 om 14:36
Update: 6 jaar geleden

Op de klimaattop in Parijs zijn zaterdag 195 landen akkoord gegaan met een nieuw klimaatverdrag dat de uitstoot van broeikasgassen moet terugdringen. Hieronder de belangrijkste punten uit het akkoord.

- De gemiddelde temperatuur op de aarde mag niet meer dan 2 graden Celcius stijgen. Landen proberen ernaar te streven de temperatuurstijging zelfs te limiteren tot maximaal 1,5 graden Celcius. Wetenschappers zijn het erover eens dat een gemiddelde stijging van meer dan 2 graden de klimaatsystemen op aarde ernstig verstoort.

NU.nl

SBT initiative for companies

WHAT IS SBTI?

The Science Based Target initiative is an initiative by (among others) the WWF, which companies can sign up for, that calculates their climate targets using scientifically defined frameworks.

WE HAVE SET OUR CLIMATE TARGETS BASED ON THE 1.5° SCENARIO OF THE SCIENCE BASED TARGET INITIATIVE

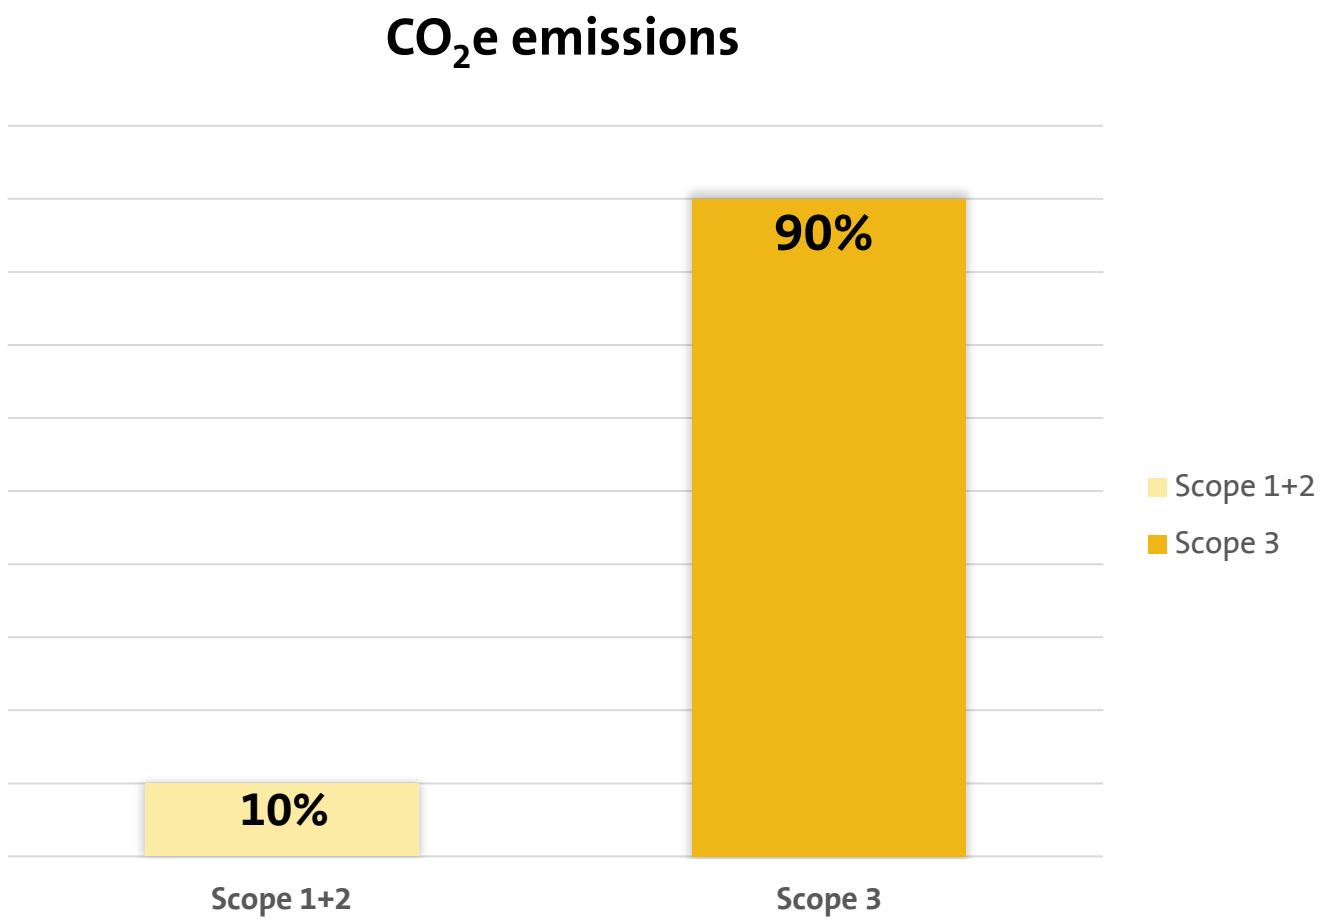

SCIENCE BASED TARGETS
DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

SBTi scope	Target	Categories
Scope 1: direct own resources	**2030:** 85% CO_2e reduction	Energy consumption
Scope 2: indirectly acquired	**2040:** Climate neutral	Transport
		Refrigerants
		Lease cars

SBTi scope	Target	Categories
Scope 3: emissions in our value chain	**2030:** 50% CO_2e reduction	Products and services
	2050: Climate neutral	Commuting
		Food waste
		Etc.

JUMBO

MORE THAN 90% OF OUR EMISSIONS OCCUR IN SCOPE 3: OUR PRODUCT CHAINS, WHICH IS WHY WE REALLY NEED YOUR HELP!

TOGETHER WITH YOU, WE WANT TO ACHIEVE OUR CLIMATE OBJECTIVES

IN BUSINESS TOGETHER & ...

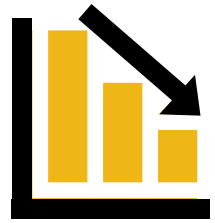

MEASURE

LEARN

INNOVATE

REDUCE

MEASURE - AT THE MOMENT, WE HAVE CALCULATED OUR CO_2E EMISSIONS AS FOLLOWS

1 million kg () x18 kg CO_2e/kg* = 18 million kg CO_2e

1.5 million kg () x2 kg CO_2e/kg* = 3 million kg CO_2e

Advantages:

- Provides initial insights into emissions 'hotspots'
- No supplier data required
- Shifting from animal to plant proteins is measurable

Disadvantages:

- No specific insights into Jumbo products & suppliers
- Emission reductions in Jumbo's chains are not measurable

MEASURING - WE ARE WORKING WITH OTHER RETAILERS TO ESTABLISH A SINGLE MEASUREMENT METHODOLOGY

1 million kg ( ) x18 kg CO_2e/kg* = 18 million kg CO_2e

1.5 million kg ( ) x2 kg CO_2e/kg* = 3 million kg CO_2e

Advantages:

- Provides initial insights into emissions 'hotspots'
- No supplier data required
- Shifting from animal to plant proteins is measurable

Disadvantages:

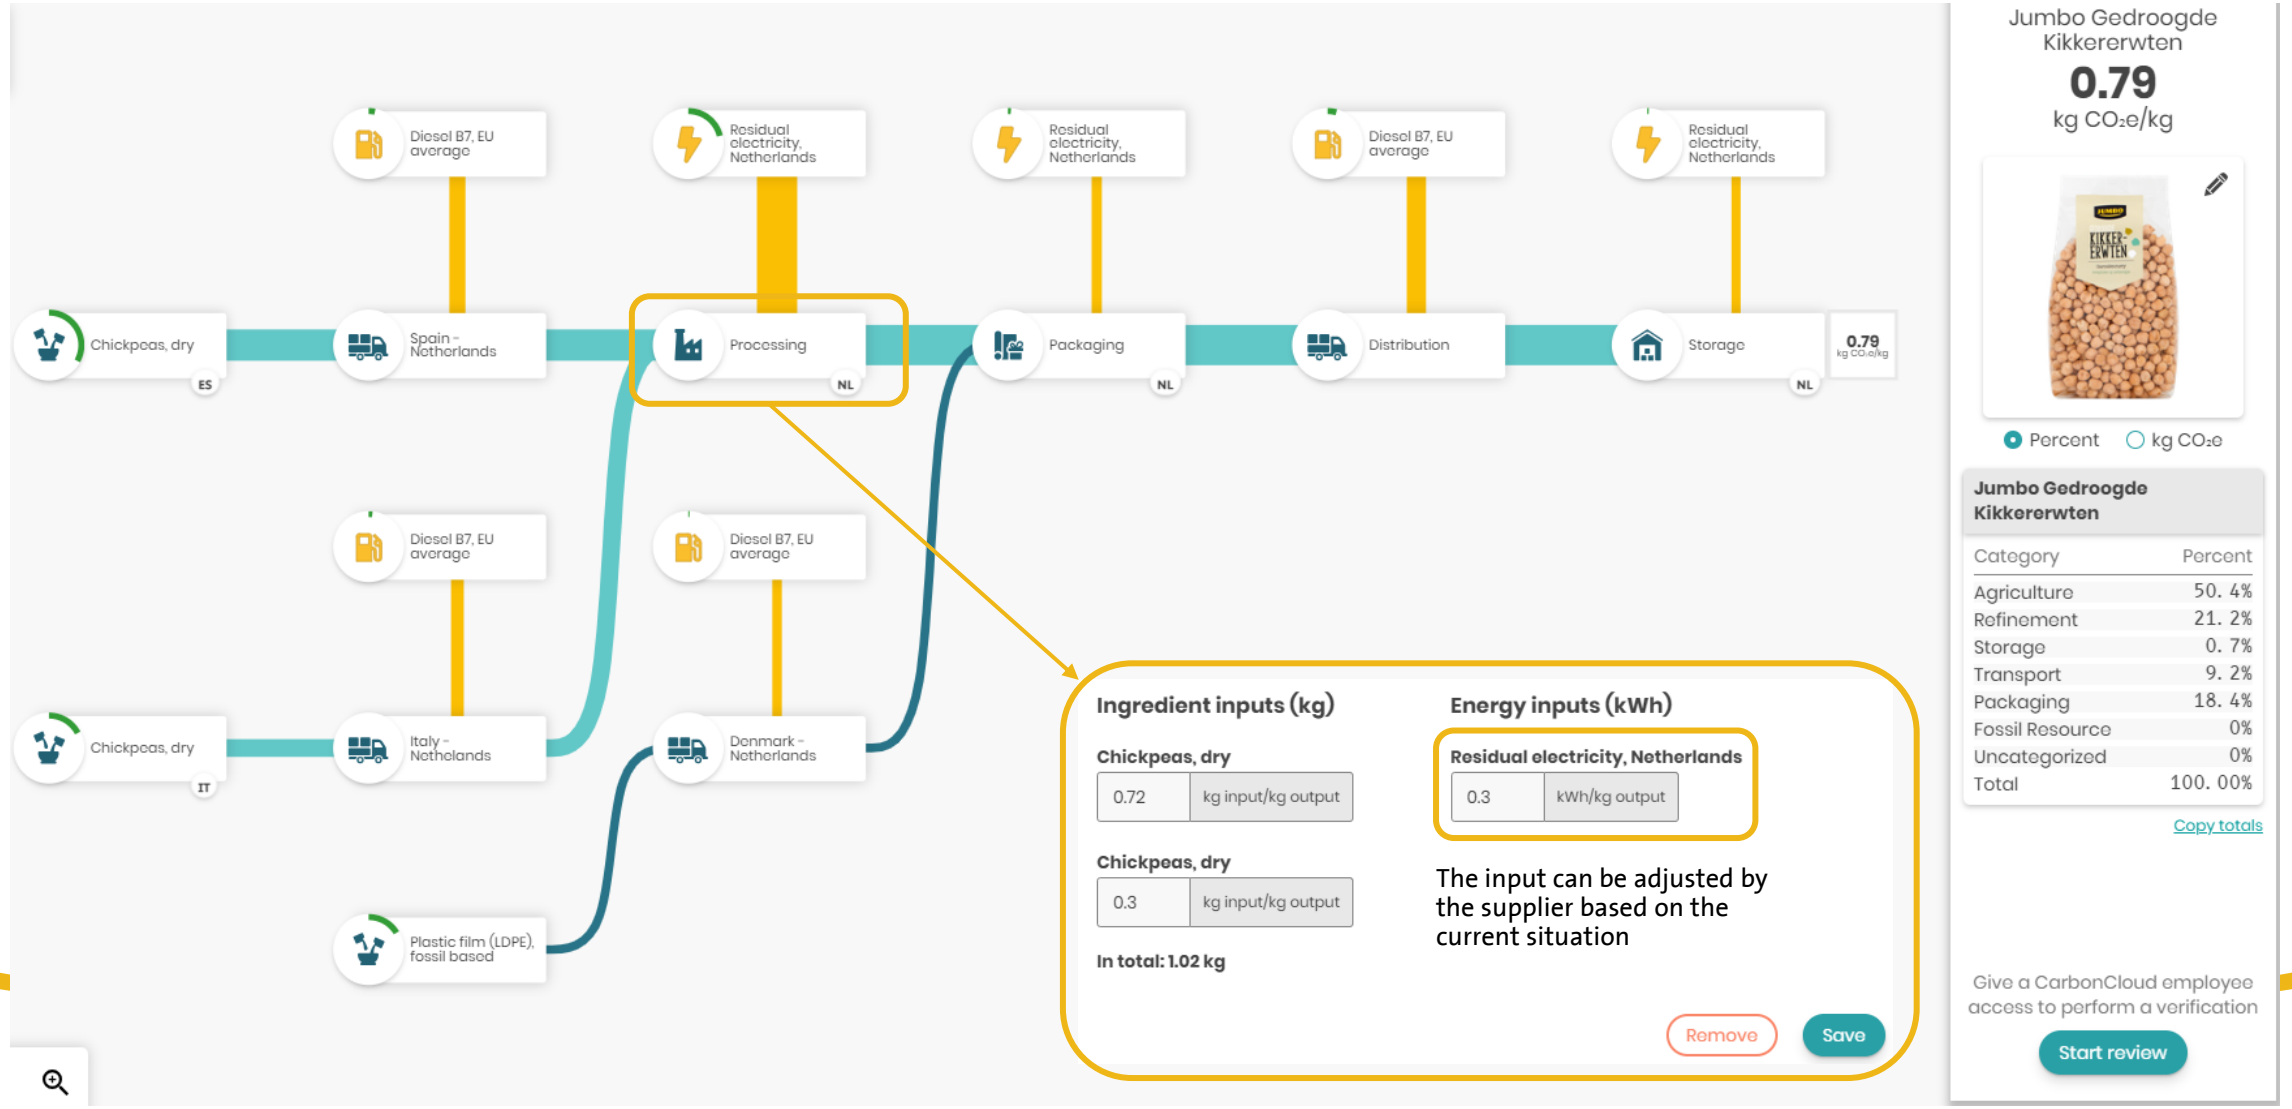

- No specific insights into Jumbo products & suppliers
- Emission reductions in Jumbo's chains are not measurable

MEASURE EXAMPLE PRODUCT CARBON-FOOTPRINT CALCULATOR

REDUCE GENERAL CO_2E REDUCTION MEASURES

- ✓(Own) renewable energy and increase energy efficiency
- ✓Optimally electrify transport and design transport
- ✓Minimise waste, utilisation of residual and waste streams
- ✓Make sure your supply chain is free from deforestation
- ✓Make use of sustainable forms of agriculture and livestock farming
- ✓Optimise livestock feed
- ✓CO_2 sequestration through optimal land use
- ✓More sustainable packaging, use reusable and recyclable packaging
- ✓Replace animal ingredients with plant-based ingredients

REDUCE THE PROTEIN TRANSITION IS GOING TO MAKE A SIGNIFICANT CONTRIBUTION TO CO_2 REDUCTION

Goal: 60% plant and 40% animal protein by 2030

Status 2023: 39% plant and 61% animal protein

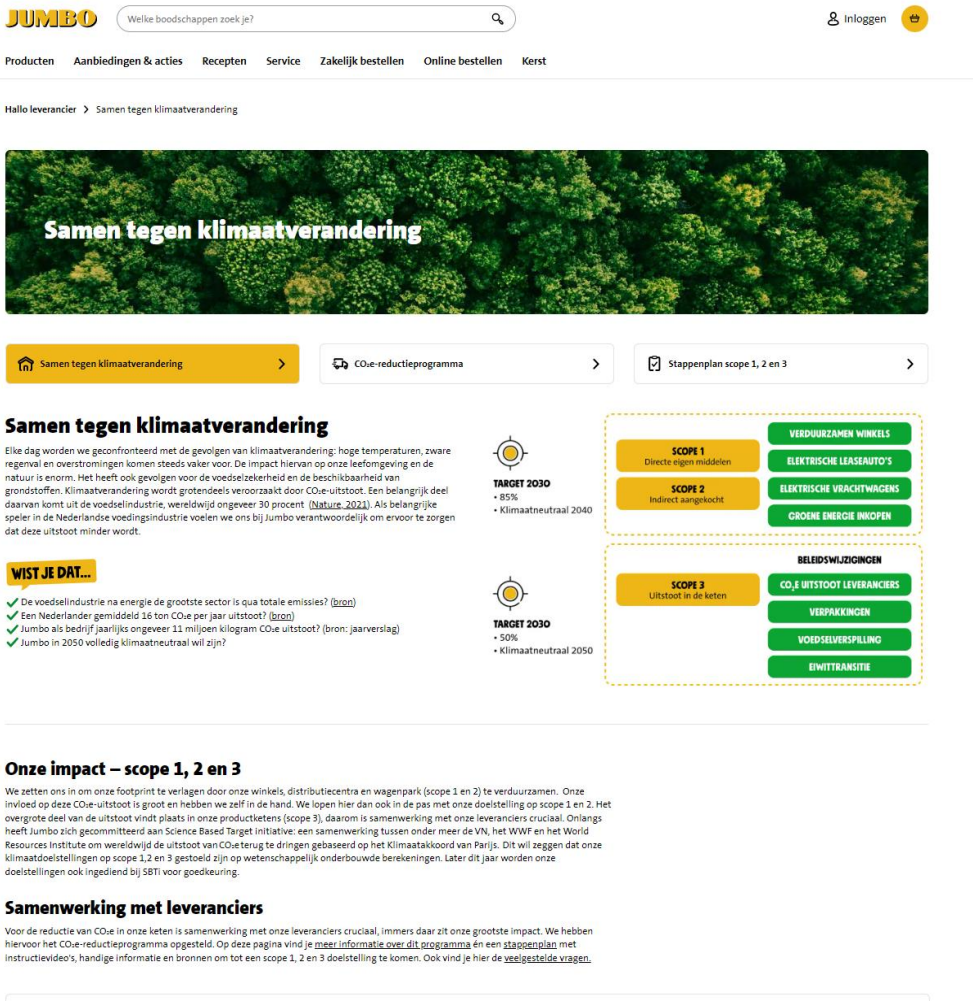

- Encourage plant-based purchasing behaviour
- Make the product range even more plant-based
- Reduce animal-based protein

LEARN SPECIAL CLIMATE PAGE LAUNCHED FOR SUPPLIERS

On this page, you will find an explanation of our objectives, information on scopes 1, 2 and 3, the SBTi, frequently asked questions and also a roadmap on how to get started.

INNOVATE & INVEST WE LAUNCHED THE JUMBO IMPACT FUND TO INVEST IN CO_2E REDUCTION IN OUR VALUE CHAINS

Why?

- Intended for projects that contribute to significant CO_2e reduction

For whom?

- Only Private Label contract suppliers can apply

When?

- The first round of applications took place in February. The second round of applications will start in September

More information and registration

- Please contact your Buyer or Category Manager

JUMBO IMPACT FUND
Together for a better climate

WHAT DO WE ASK OF YOU?

JUMBO

WHAT DO WE ASK OF OUR PARTNERS?

1. To start working on mapping scopes 1, 2 and 3 and CO_2e data

2. **Committing to the SBTi's 1.5°C scenario** by the end of May
committing to the SBTi will be included in the CSR conditions from 2025 onwards
For SMEs, the SBTi has drawn up a shortened route that allows for skipping to the commitment step.

3. **If you have an idea for the Impact Fund,** please share it with your Buyer or Category Manager

4. **Inform us about CO_2 reductions achieved and new initiatives** at mvo@jumbo.com

5. Make sure **your product data in Impact Buying** (formerly SIM) is complete and up to date

HOW

OUR FIVE PILLARS

ARE SHAPING SUSTAINABLE FOOD VALUE CHAINS

1. CO2 Emission Reduction
Minimizing carbon dioxide emission throughout the value chain.

2. Living Income
Ensuring living income for all involved in the value chain.

3. Good Working Conditions
Creating safe and supportive workplaces for employees.

4. Zero Food Waste
Minimizing waste at every stage of the value chain.

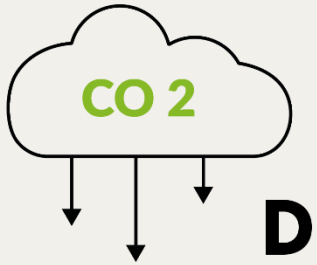

5. Local Development
Committed to fostering growth across various themes.

THE DETOUR CASHEW

1. CO2 Emission Reduction Through Direct Shipment

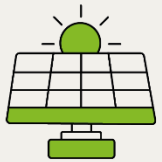

Direct Shipment

Shipping directly from Tanzania to Europe saves every container 12,000 km, which equals about 60% of transport CO2 emission reduction.

Local Processing

By peeling and processing cashews locally, only the edible part is shipped. Reducing the shipment weight by 75%.

Various Initiatives

Not only is CO2 emission reduction achieved through more effective transport, but also through various initiatives. At Amama and its surrounding farms, farmers are trained in eco-friendly practices, energy is obtained from waste, and we are transitioning towards solar energy.

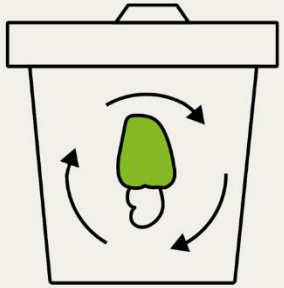

“TURNING BYPRODUCTS INTO VALUE-ADDING PRODUCTS”

THE ZERO

4. FOOD WASTE

In the landscapes of Tanzanian farms, the cashew tree stands as not just a source of the famed edible nut but a symbol of unexplored potential. Much of the cashew’s potential is unrealized and often regarded as waste, but we are working towards a 100% utilization.

Historically, the spotlight has largely been on the edible cashew nut, which is the version most people worldwide recognize on supermarket shelves. However, many are unaware that each cashew nut actually originates from inside a shell, which is itself attached to a cashew apple. So every cashew nut you see at the store is the product of not just the nut, but also a shell and an apple.

Apple

Aware of the apple’s nutritional benefits, Amama Farms is exploring methods to utilize its delicious juice as a wholesome beverage choice, while also leveraging its qualities for bio-ethanol production.

Oil

By pressing the cashew shell, valuable cashew oil is extracted. This biocomponent is resourcefully utilized in the production of waxes, coatings, and asphalt.

Cake

After extracting the oil from the cashew shell, what remains is the ‘cake’ of the shell. Rather than discarding this residual material, we utilize its potential by using it to generate steam in the factory for the cashew process.

FREQUENTLY ASKED QUESTIONS

JUMBO

THANK YOU
FOR YOUR ATTENTION!

The recording and presentation will be shared later this week
